— Workshop Overview

Fixed assets management and accounting is critical for any organization as fixed assets are the major resources used to produce products and generate future benefits. This course discusses the management and accounting of these assets based on the British Standard Institute Publicly Available Standard (PAS 55). This course includes the 28 points of PAS 55 which help maximize the utilization of fixed assets and which are divided into: fixed assets policy, strategy, management enablers and controls, implementation of management plans, performance assessment and improvement, and management review. The management and accounting of fixed assets covers all life-cycles of fixed assets from creation or acquisition to utilization and maintenance until renewal or disposal. The management part also includes decision making tools such as NPV, IRR and other capital budget comparative tools used to decide whether to acquire, replace or refurbish assets. The accounting part is based on the International Financial Reporting Standards (IFRS), mainly standard number 16 for property plant and equipment, and IFRS 38 for intangibles. The course covers capitalization rules for fixed assets and intangibles, and rules for measuring assets at fair value. In addition, the course covers various depreciation methods and assets impairment rules, measurement and accounting.

Why Attend

The course uses a mixture of presentations by the consultant and the participants in addition to group and individual exercises, case studies and role plays.

Who Should Attend

Fixed assets professionals including supervisors, account managers, purchasing and facility supervisors and coordinators, financial controllers, new employees handling fixed assets, internal auditors, maintenance assistants and managers, and operations managers.

— Learning Objectives

- Apply the 28 point requirements to establish a whole life asset management system according to PAS 55 and ISO 55000
- Evaluate investments in fixed assets according to Net Present Value (NPV), Internal Rate of Return (IRR) and other methods
- Recognize and correctly measure fixed assets and intangible assets under International Financial Reporting Standards (IFRS)
- Justify the accounting and reporting for transactions throughout the life of the assets

- Account properly for impairment, disposals, and sales of long lived assets
